## Thermal Data

Parameter	Symbol	Typical	Maximum	Unit
Thermal Resistance, Junction-to-ambient (Note 2)	t≤10s	18	22	°C/W
	Steady State	42	50	
Thermal Resistance, Junction-to-case	R <sub>θJC</sub>	1.3	1.5	

- Note : 1.The power dissipation P<sub>D</sub> is based on  $T_J(MAX)=150^\circ C$ , using junction-to-case thermal resistance, and is more useful in setting the upper dissipation limit for cases where additional heatsinking is used.
- 2.The value of R<sub>θJA</sub> is measured with the device mounted on 1 in<sup>2</sup> FR-4 board with 2 oz. copper, in a still air environment with  $T_A=25^\circ C$ . The power dissipation P<sub>DSM</sub> is based on R<sub>θJA</sub> and the maximum allowed junction temperature of 150°C. The value in any given application depends on the user's specific board design.
- 3.Repetitive rating, pulse width limited by junction temperature  $T_J(MAX)=150^\circ C$ . Ratings are based on low frequency and low duty cycles to keep initial  $T_J=25^\circ C$ .
