## Thermal Data

Parameter	Symbol	Steady State	Unit
Thermal Resistance, Junction-to-case	$R_{\theta JC}$	4.7	$^\circ\text{C/W}$
Thermal Resistance, Junction-to-ambient	$R_{\theta JA}$	48	

Note:

- \*a. The power dissipation  $P_D$  is based on  $T_{J(MAX)}=150^\circ\text{C}$ , using junction-to-case thermal resistance, and is more useful in setting the upper dissipation limit for cases where additional heatsinking is used.
- \*b. The value of  $R_{\theta JA}$  is measured with the device mounted on 1 in<sup>2</sup> FR -4 board with 2 oz. copper, in a still air environment with  $T_A=25^\circ\text{C}$ . The power dissipation  $P_D$  is based on  $R_{\theta JA}$  and the maximum allowed junction temperature of  $150^\circ\text{C}$ . The value in any given application depends on the user's specific board design.
- \*c. Repetitive rating, pulse width limited by junction temperature  $T_{J(MAX)}=150^\circ\text{C}$ . Ratings are based on low frequency and low duty cycles to keep initial  $T_J=25^\circ\text{C}$ .
